Summary

Engineer turned AI product manager who ships. Moved from writing code into product, where the harder job is deciding what gets built. Owns **AidenResearch**, a multi-agent GenAI platform used by 8,000+ people across global capital markets and featured in NVIDIA's published customer story. Came up through engineering, so digs into the technical trade-offs and ships AI products people actually use, and builds and launches personal AI tools on the side.

Experience

Royal Bank of Canada

Jan 2025 – Present

Product Manager - Alternative Data, GenAI & Research Technology

Toronto, ON

- Own the strategy and roadmap for **AidenResearch**, a multi-agent GenAI research platform (QuickTakes - analyst voice research notes, Earnings Call Agent - real time sentiment extraction, and RBC Insight Agent - a natural language research search agent), one of the flagship AI initiatives behind RBC's \$700M-\$1B AI enterprise-value ambition.
- Led 3 AI agents from concept to production launch, coordinating a 20-person cross-functional team across Engineering, UX, QA, Program Management, business, marketing, and operations to ship secure B2B features on time with fewer post-launch defects.
- Drove measurable enterprise outcomes: QuickTakes delivers earnings insights 60% faster, and the Financial Model Agent cut model-update time from 12 hours to under 2.
- Defined AI success metrics (latency, accuracy, explainability) and ran user discovery and experimentation, turning feedback into structured improvements that lifted post-launch adoption 25%.
- Presented product strategy and trade-offs to MD-level leadership and broke a stalled prioritization decision, aligning stakeholders on what to build next across 5+ concurrent AI initiatives.

Royal Bank of Canada

Sept 2023 – Dec 2024

Software Developer

Toronto, ON

- Built and shipped a real-time trading and reporting analytics platform that RBC Capital Markets traders relied on to make critical, time-sensitive trading and client decisions, engineering a reusable React/Next.js/MUI component library that improved feature adoption by 45%.
- Boosted platform performance 40% through React Query caching and API optimization, and built a reusable charting/tooltip architecture that helped traders interpret complex data and calculations faster (user comprehension +25%).

Cognizant Technology Solutions

Mar 2021 – June 2022

Programmer Analyst

Pune, India

- Built SQL pipelines and full-stack applications across the SDLC; resolved 200+ client issues and 150+ production defects with a 50-person team.

Personal Projects

Vibe Route | [GitHub](#) | [Live](#)

- **Google Maps tells you the fastest route; this tells you the best one.** An AI walking-route scorer that ranks streets by how they *feel* using density-based clustering and LLM-generated narratives; rejected LLM-based scoring to avoid the affluence bias that keeps Maps from shipping this, grounding the design in 6 peer-reviewed studies.

Blind Spot | [GitHub](#) | [Live](#)

- **80% of what you watch was chosen by an algorithm; this shows you what it's hiding.** Surfaces your Netflix filter bubble with content-based profiling, cosine similarity, and a Herfindahl diversity index, then uses an LLM (constrained to verified data to prevent hallucination) to recommend titles you'd never have found.

Technical Skills

AI/ML: GenAI, LLMs, AI Agents, RAG, Prompt Engineering, NLP, Model Evaluation & Guardrails, Responsible AI

Product: Product Strategy & Roadmap, 0-to-1 / Conception-to-Launch, Experimentation / A-B Testing, User Research, Data Analysis, PRDs, Go-to-Market

Technical: Python, SQL, JavaScript, TypeScript, React, Next.js, Node.js, Git, MySQL, MongoDB

Education

University of Windsor

Sep 2022 – Apr 2024

Master of Applied Computing

CGPA - 8.00

Gujarat Technological University

Aug 2016 – Aug 2020

B.E. in Computer Engineering

CGPA - 8.98
